

Main Criteria

The applicant is to program a simple application for Pokédex. A Pokédex is a digital encyclopedia created by [Professor Oak](#) as an invaluable tool to [Trainers](#) in the [Pokémon world](#). It gives information about all [Pokémon](#) in the world that are contained in its database.

In order to create the Pokédex, you can consume the [PokéAPI](#) on <https://pokeapi.co/> (for REST) or [PokéGraphQL](#) on <https://graphql-pokemon2.vercel.app/> (for GraphQL) and leverage them for your own usage to create the Pokédex.

There are several features that needs to be completed:

- Pokémon trainers can browse Pokémon in an infinite scrolling method so that the trainers can see all the pokemons without any interruption.
- Pokémon trainers can view detailed information about each Pokémon.
- Pokémon trainers can view the image of each Pokémon.
- Pokémon trainers can favourite certain Pokémon and can see the list of the favourited Pokémon.
- Pokémon trainers can filter the Pokémon based on the Pokémon types (e.g. Water, Grass, Fire, Ghost, Flying).

Extra feature that can score you additional points:

- Deliver a Mockup/Prototype (at least [Low Fidelity Design](#)) for your application. It is compulsory for you to use [Figma](#) for this.

Code Considerations:

- Code quality and maintainability
- Application design and abstraction layer
- Source control familiarity
- Application is running well in a local environment or cloud infrastructure
- Application documentation

Extra Notes:

- If you are applying for a front-end position that uses **Vue.js**, please use **Vue.js (version 3)** as the framework.

- If you are applying for a front-end position that uses **Angular**, please use the **latest Angular** as the framework.
- Depending on the position you are applying, here are the tasks that you need to complete:
 - For **Vue.js**, the application has to cater for a **desktop web application** and a **mobile web application**
 - For **Angular**, the application has to cater for a **desktop web application**, a **mobile web application** and a **native application that supports both iOS and Android using latest Ionic and Capacitor**
- The application source code must be uploaded to a source control environment.
- The application must run in a **local environment** (please add the steps documentation on how to run the app in your README) or in a **cloud infrastructure** (please make sure that the application is accessible).
